1. Chapter II Ex-14 Q. 1

1) Problem Statement:Find the in-centres of the triangles whose vertices are as follows, (6,-3), (6,18), $(\frac{-2}{3}, 2)$

Solution: let

$$\mathbf{A} = \begin{pmatrix} 6 \\ -3 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 6 \\ 18 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} \frac{-2}{3} \\ 2 \end{pmatrix} \tag{1.1}$$

$$a = \|\mathbf{B} - \mathbf{C}\| = 17.334 \tag{1.2}$$

$$b = \|\mathbf{C} - \mathbf{A}\| = 16.416 \tag{1.3}$$

$$c = \|\mathbf{A} - \mathbf{B}\| = 31 \tag{1.4}$$

Now in-centre of a triangle,

$$In - centre\ \mathbf{I} = \frac{a\|\mathbf{A}\| + b\|\mathbf{B}\| + c\|\mathbf{C}\|}{a + b + c} \tag{1.5}$$

$$\mathbf{I} = \begin{pmatrix} \frac{181.73}{64.75} \\ \frac{132.15}{64.75} \end{pmatrix} \tag{1.6}$$

$$\mathbf{I} = \begin{pmatrix} 2.8 \\ 2.1 \end{pmatrix} \tag{1.7}$$

Hence, the In-Centre of Triangle I = (2.8,2.1)
